## Incubation Alliance Inc.

- Large-scale synthesis of graphene
- Development, manufacturing and sale of 100% graphene heat-dissipating components that are lightweight with high thermal conductivity
- Molding and commercialization of a variety of 3D graphene parts

Example of 3D graphene parts

- By cooperating with large businesses, the aim is to implement large-scale synthesis of graphene, which has not yet been applied in the market
- To provide ground-breaking heat-dissipating solutions following the development of new electronic devices and the increasing amount of heat generated such as with wearable devices as well as electronic cars and IoT
