System Integrator
(Sler)

- By combining scenario databases specialized for each industry and on original deep learning, it is possible to provide an AI dialogue system with highly accurate responses. This technology contributes to both improving productivity and cost reduction across a wide range of industries, by automating operations such as customer services and reception desks.
- This technology contributes to regional revitalization of local governments that have productivity issues due to an ageing society, by maintaining and improving productivity of the workforce through AI-powered social implementation models.
