Introduction of products and
services

Royal Gate Inc.'s business

Royal Gate plans to develop and offer devices that handle various aspects of payment, with smartphone credit card reader Paygate® at the core.

The company has already successfully developed the world's first Windows 8.1-compatible payment module with Bluetooth credit card reader.

Going forward, Royal Gate will offer a consumer-focused wallet service through collaboration on payment modules with mobile POS and other companies' POS systems, and promote the product's application in big data and aggregation of consumer trends. Royal Gate also plans to expand its payment infrastructure globally with a Paygate® package offering.
